

VACUUM SCRAPER

PARTICULATE EXTRACTION AND BELT CLEANER SYSTEM

BELTING LTD

EXCEPTIONAL PERFORMANCE, LONG LASTING & DURABLE

Infinity Belting's patent pending Vacuum Scraper Particulate Extraction System removes conveyor belt surface build up and sends it to a collection point for easy removal. This is the must have system to eliminate potential dangers associated with particulate build up within your operation.

FEATURES AND BENEFITS:

- Patent Pending Vacuum Scrapers can be installed to suit any Bulk Handling System.
- Particulate extraction is performed via the vacuum generated by supplied pneumatic pressure.
- Patented Anti-Static Finger Paddles™ mitigate potential spark, fire and/or explosion risks associated with particulate build up.
- Patented Finger Paddles™ flex and conform to the belt surface ensuring adaptable surface contact without excessive pressure having to be applied.
- The patented flexing, flicking action of the Fingers Paddles provide longer dwell time on the Pulley surface to ensure superior cleaning.
- 5052-H32 light weight, high strength construction will give long term service in all applications.
